OBJECTIVE

Artificial Intelligence undergraduate with hands-on experience in Machine Learning, Data Analytics, NLP, RAG and Predictive Modeling using Python and Scikit-Learn. Proficient in data preprocessing, feature engineering, and developing end-to-end AI applications through real-world projects. Seeking an internship to apply analytical and technical expertise in building scalable AI-driven solutions.

EDUCATION

Bachelor of Technology (B.Tech) in Artificial Intelligence

SAGE University, Indore

Expected Graduation: 2028

CERTIFICATIONS

IBM Data Science Orientation Certificate (4-Month Program)

Verified Digital Badge – Artificial Intelligence, Machine Learning, and Data Science

[View Badge](#)

TECHNICAL SKILLS

Programming Languages: Python, SQL

AI / ML: Machine Learning, Data Analytics, Predictive Modeling, Natural Language Processing (NLP), RAG, Feature Engineering, Data Preprocessing, Model Evaluation, Artificial Intelligence, Data Science, LLM, MLOps

Database / Tools: LangChain, Pinecone, Jupyter Notebook, Google Colab, GitHub, MySQL, Claude

Libraries: Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, TensorFlow

PROJECTS

AI Gardening Chatbot (Fruits & Vegetables Domain)

- Developed an AI-powered chatbot for fruits and vegetable gardening guidance using NLP-based techniques.
- Implemented Retrieval-Augmented Generation (RAG) using LangChain and Pinecone for intelligent document retrieval.
- Utilized OpenAI API (LLM) for generating context-aware responses.
- Processed PDF-based knowledge sources to enable domain-specific question answering.
- Built full-stack application using Flask, HTML, and CSS.

AI PR Reviewer — LLM-Based Code Review System

- Developed an AI-powered GitHub Pull Request Reviewer using Gemini LLM for automated code analysis.
- Built a FastAPI backend to fetch Pull Request details and code diffs using GitHub API.
- Applied NLP concepts and prompt engineering to identify bugs, security issues, and code quality improvements.
- Designed an interactive Streamlit interface for automated PR review visualization.

CareerPilot AI – AI-Powered Career Recommendation System

- Developed an AI-powered career guidance platform that recommends suitable career paths based on user skills, education, and interests.
- Applied Machine Learning and Data Science techniques using Python, Pandas, NumPy, and Scikit-Learn to build predictive career recommendation models.
- Performed Data Analytics, data preprocessing, feature engineering, and model evaluation on career-related datasets to improve recommendation accuracy.
- Utilized Natural Language Processing (NLP) for resume analysis, skill extraction, and career-role matching.
- Developed REST APIs using FastAPI and integrated them with a React-based frontend for real-time career recommendations.

Car Evaluation Machine Learning Project

- Built a Decision Tree-based Machine Learning model to classify car acceptability using vehicle attributes and safety-related features.
- Performed data preprocessing, label encoding, feature analysis, and model training using Scikit-Learn.
- Evaluated classification performance using accuracy metrics and visualized decision tree outcomes for interpretability.
- Technologies Used: Python, Pandas, NumPy, Scikit-Learn, Machine Learning, Decision Tree, Matplotlib, Seaborn.
